

## **Project Presentation Template**

1. The presentation should start with the problem statement and why it's being presented.  
How is this addressed today and what are the shortcomings of current solutions?
2. Define the purpose and scope of the project. Provide a concise summary of:
  - a. the project objectives
  - b. the deliverables required to satisfy the project objectives
3. Describe the assumptions on which the project is based. Describe the imposed constraints and risks on the project such as schedule, budget, quality, software to be used, H/w components, external interfaces.
4. Why is your value prop unique and compelling? Why will it endure? And where does it go from here?
5. What are your product's strengths and advantages over other(competing) solutions?
6. Provide a summary of the schedule and budget for the project.
7. How did you utilize your stipend received during the last 3 months?
8. Design Diagram
9. Specify the H/w and S/w development methodologies, programming languages, as well as the processes, tools, and techniques to specify, design, create, test, integrate, document, deliver, modify, and maintain project deliverable and non-deliverable work products.
10. Details of the prototype (If it is ready)
11. Milestone for the next 3 and 6 months.
